Failure to observe the warning may result in life threatening injury by electric shock.

- Do not operate any heater with a damaged cord or plug or after the heater malfunctions, has been dropped or damaged in any manner.  
If heater has leaked any oil, discontinue using the heater and contact the service centre as indicated in the instruction leaflet. Return heater to authorized service facility for examination, electrical or mechanical adjustment, or repair.
- This heater is not intended for use in bathrooms, laundry areas, or similar indoor locations. Never position the appliance where it may fall into a bathtub or come in contact with water.
- Use this appliance only as described in this manual. Any other use not indicated by the manufacturer may cause fire, electric shock, or injury to persons.
- CAUTION: To prevent electric shock, make sure the wide prong of the plug is inserted in the wide slot of the outlet.

Failure to observe the warning could result in injury or damage to the appliance.

- The appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.  
Children should be supervised to ensure that

they do not play with the appliance.

- Extreme caution is necessary when any heater is used by or near children or invalids and whenever the heater is left operating and unattended.
- Do not wrap the cord around the appliance immediately after use.
- To prevent current overload and blown fuses, make sure that no other appliance is plugged into the same outlet or into another outlet wired into the same circuit.
- If the power cord is damaged, to reduce the risk of malfunction it must be replaced by the manufacturer, its service agent, or a licensed and qualified professional.
- Do not use this appliance with an extension cord or outlet strip. Connect the appliance directly to a suitable outlet.

Failure to observe the warning could result in burns or scalds.

- This appliance gets very hot when in use. To prevent burns, do not touch hot surfaces with bare skin. Use the handle when moving the appliance. Keep all flammable materials, such as furniture, pillows, bedding, paper, clothing, and curtains at least 3 feet (90 cm) from the front and top of the appliance, also avoid contact with the sides and back.
- Do not run the power cord under carpeting. Do not cover cord with throw rugs, runners, or the like. Keep the cord away from any passageways where it could be tripped over.
- Do not insert or allow foreign objects to get into the air intake or air outlet grille, as this may cause electric shock or fire, or damage the appliance.
- To prevent a possible fire, do not block air intake or air outlet grille in any way. Do not use the appliance on soft surfaces, such as beds, where the openings may become blocked.
- Do not cover the appliance while it is functioning in order to avoid overheating and the risk of fire.

- The internal parts of the appliance can become very hot or produce sparks during operation. Do not use the appliance in areas where gasoline, paints, or other flammable liquids are used or stored.
- It is normal for heater's plug and cord to feel warm to the touch. However, an excessively hot or deformed plug or cord is not normal and may be the result of a defective electrical outlet. Defective outlets must be replaced before using the heater. Plugging the heater into a worn outlet may result in overheating of the power cord or may cause the risk of fire.
- Do not place the heater near a bed because objects such as pillows or blankets can fall off the bed and be ignited by the heater.

**Please note:**

This symbol indicates recommendations and important information for the user.

- If your radiator is equipped with a polyethylene tape used as a carry handle, remove it before connecting appliance to the outlet.

## INSTRUCTIONS FOR USE

### Switching on

Turn the thermostat dial clockwise to maximum.

Turn on both switches. The lights on the switches remain on irrespective of the cycle set by the thermostat.

When the room reaches the required temperature, turn the dial counter clockwise slowly until you hear a click.

The appliance will come on and go off automatically to maintain the required temperature.

### Economiser

For economy of use, the switches can be used singly:

- button in position «**MIN**» only = minimum power (light on)
- button in position «**MED**» only = medium power (light on)
- buttons in both positions «**MIN**» and «**MED**» = maximum power (lights on)

### Using the thermostat

The thermostat operates on the basis of room temperature and not radiator temperature.

Turn the thermostat dial counter clockwise towards the lower numbers to reduce the temperature; turn it clockwise towards the higher numbers to raise the temperature. To turn the appliance off completely, turn the thermostat to minimum ✱ and unplug from the outlet.

### Frost protection function

With the thermostat in position ✱ and the switches pressed, the appliance maintains the room at a temperature of about 41°F (5°C), preventing freezing with minimum energy consumption.

### COMFORTEMP BUTTON

With the "COMFORTEMP" button and both switches pressed, the appliance is automatically set to reach and maintain what is considered to be the comfort temperature.

A green light comes on to indicate activation of "COMFORTEMP". In this mode the temperature is automatically set only by the "COMFORTEMP". To deactivate this mode and return to thermostat operation, press the COMFORTEMP button again.

### MAINTENANCE

Before carrying out any operation on the radiator, unplug from the electric outlet and wait for it to cool.
